

Lips Healing Process

Days

- 1-2: Lips will appear darker and swollen when first done.
Keep area moist.
- 3-4: Peeling may begin and color may appear with a slight pinkish/Orange effect.
- 5-6: Lips may be dry and possibly chapped and first stage of color is ending.
- 7-14: Color may look like it is totally gone, do not be concerned this is all part of the process.
- 15-21: Pigment color will begin to show, lips may remain dry for a month or two. Use a good lip balm to help.

Notes:

Lips will ooze a couple of days. Blot and reapply ointment. After sleeping, crust will have dried on the lips. Rinse with water or put more ointment on to loosen crust, blot and reapply ointment. A cool saturated cloth feels good to blot with.

Lips will be tender at first. Drink through a straw. Do not excessively stretch lips while they are healing with big smiles, or pucker lips with smoking.

Lip skin is a continuation of the delicate mucous membrane. It is not strong like normal skin.

On day 3, lips stop oozing and start peeling. This is when the chapped lip feeling is strongest. Massage the lips after placing thick layer of ointment on them and making gentle circular motions with one finger. The massage helps get loose skin off that is ready to come off without yanking out skin that is not ready to come off. Lips will peel for a week. Picking off skin that is not ready to come off will cause pigment loss.

Try to keep toothpaste off lips while healing. Do not have teeth bleached while healing. During the peeling process it may look like there is not much color there.

Color is more apparent by the second week. Final result is not judged for 2 months.

Do not use anything made for cold sores or blisters because although they initially feel moisturizing, they turn around and dry the lips out.

Some do more damage than that, especially if applied on broken lip tissue during the healing process. Applying vitamin E will usually help.

Eyeliner Healing Process

Days

- 1-2: Liner will appear thicker, darker and swollen
(ice may be used to reduce swelling)
- 3-4: Pigment begins to lift away with a tight feeling.
Some itching is normal, Do not pick area.
- 5: The color will clarify to its results.

Notes:

Do not wear contact lenses during the

Procedure or for 24 hours.

Have sunglasses available, eyes may be sensitive or even dilated immediately after.

Do not dye, perm, or use eyelash curler for 2 wks.

Ideally it will be best to avoid mascara during healing process.

A new tube of mascara is highly recommended due to risk of bacterial presence in used tubes.

Stay a little farther out on the lashes, not too close to the liner. Remove with Vaseline or baby oil without rubbing it into liner. Eyes will be swollen for a few days. Eyes may feel dry or irritated lubricating refresher drops may be used.

Brow Healing Process

- Days**
- 1-2: Color will be darker and bolder in width (keep moist with ointment)
 - 3: Exfoliation will begin causing the excess pigment surrounding the eyebrow procedure to flake away and the eyebrows will appear narrower.
 - 4: Eyebrow may itch, this is the normal healing process. Do not pick at the area.
 - 5: Pigment will peel off and the eyebrows will appear softer.
 - 6-14: Color enhances to final results.

What Not To Do and Avoid

- Do not pick/tweeze/wax/perform electrolysis one week before procedure.
- Do not tan two weeks prior or have sunburned face.
- Do not have any type of facial 2 weeks prior to treatment
- Do not work out the day of the procedure
- Do not have Botox 3 weeks prior
- Do not take fish oil or vitamin e one week prior (natural blood thinners)
- Do not wax or tint your eyebrows 3 days before the procedure.
- No facials, Botox, chemical treatments or micro-dermabrasion for 4 weeks.
- Avoid hot, sweaty exercise for one week.
- Avoid direct sun exposure or tanning for 4 weeks after procedure. Wear a hat when outdoors.
- Avoid heavy sweating and long hot showers for the first 10 days.
- Avoid sleeping on your face for the first 10 days.
- Avoid swimming in lakes, and hot tubs for the first 10 days.
- Avoid topical makeup including sunscreen on the area.
- Do not rub, pick or scratch the treated area.
- Use a fresh clean pillow case
- Let any scabbing or dry skin naturally exfoliate away. Picking can cause scarring or loss of color.
- Once the color has come back and the brows are all healed there may be a few areas where there are patches with no color. It is impossible to make the brows perfect and fully colored the first time. This is what the touch up is for and why we recommend to get the touch up 6-8 weeks after the first procedure.

In order to avoid excessive bleeding and poor color deposit:

Do not drink alcohol 24-48 hours before procedure
Do not take an aspirin or ibuprofen for pain relief (this thins the blood). Avoid Face Anti-Aging Cream on your Microbladed Brows, Eyeliner & Lips.

PLEASE MAKE SURE YOU FOLLOW THESE SAME INSTRUCTIONS FOR TOUCH UP.

Apply a rice grain amount of aftercare ointment with a cotton swab and spread it across the treated area. Be sure not to over-apply as this will suffocate your skin and delay healing. The ointment should be barely noticeable on the skin. Never put the ointment on wet or damp microbladed brows.

Days 1-7: Moisturize 3x day

Wash daily to remove bacteria and dead skin. (Do not worry, this does not remove the pigment) Gently wash your eyebrows each night with water and an antibacterial soap like dial or sensitive soap Cetaphil or Neutrogena. With a very light touch, use your fingertips to gently cleanse the eyebrows. Rub the area in a smooth motion for 10 seconds and rinse with dry, gently pat with a clean tissue. Do not use any cleansing products containing acids (glycolic, lactic, or AHA), or any exfoliates.

Days 1-7: Wash lymph.

Gently blot the area with damp cotton ball to absorb excess lymph fluid. Do this every hour for the full day until oozing has stopped. Re-moving this fluid prevents hardening of the lymph.

The day of the treatment: Absorb
